Meet now calls & phone notifications

When someone calls you with **Meet now**, the Workspace now rings — on your laptop *and* on your phone, like a phone call. New tasks, meeting invites, announcements and deadline reminders reach your phone too. It takes about 5 minutes to set up, once per device.

Workspace: `https://employee-management-sigma-sable.vercel.app`
Sign in with your **employee ID** (e.g. FR-0042) and password, and tick **"Keep me signed in on this device"** on your own phone and laptop.

1. How Meet now works

Who	What happens
The caller	**Calendar → Meet now** (or **Meet now** on someone's profile) → pick the person → **Start call**. Google Meet opens for you straight away.
You, on your laptop	If a Workspace tab is open, a full-screen card appears — *"Sehej is inviting you to a call right now"* — and a **ringtone plays**. Click **Join** to open the call, or **Not now**. If the tab is closed but notifications are on, you get a notification instead.
You, on your phone	A notification **rings and vibrates every 15 seconds for up to 90 seconds**, with **Join** and **Not now** buttons (on iPhone, tap the notification to join). Your phone uses its own notification sound.
Answered anywhere	Join or decline on one device and the others stop ringing within a few seconds.
Didn't pick up	After 90 seconds the ringing turns into a **"Missed call from …"** notification. Tap it to join if the call is still going.

2. Laptop (Chrome or Edge) — 1 minute

1. Open the Workspace and sign in. On **Home** you'll see **"Don't miss a call"** → click **Turn on** → **Allow**. (Or go to **Settings → Notifications → Turn on**.)
2. Click **Send a test** in **Settings → Notifications** — a notification should pop up.
3. During work hours **keep one Workspace tab open** (pinned) so the ringtone can play, and keep your laptop sound on.

No test notification? Your computer may be blocking Chrome. **Windows:** Settings → System → Notifications → turn on **Google Chrome** (and switch off *Do not disturb*). **Mac:** System Settings → Notifications → **Google Chrome** → Allow notifications, style **Alerts**, and check *Focus* is off.

3. Android phone — 2 minutes

INSTALL

1. Open **Chrome** and go to the Workspace address above. Sign in (tick **Keep me signed in**).
2. Tap ⋮ (top right) → **Add to Home screen** (or **Install app**) → **Install**. A **Focus Realm** icon appears on your home screen.

TURN ON

3. Open **Focus Realm** from your home screen. On **Home**, tap **Turn on** under *"Don't miss a call"* → **Allow**.
4. Go to **Settings → Notifications → Send a test**. You should feel/hear it.

Make calls ring reliably:
• Phone **Settings → Apps → Chrome** (or Focus Realm) → **Notifications**: allowed, with sound.
• **Settings → Apps → Chrome → Battery** → **Unrestricted** (or turn off battery optimisation) so notifications aren't delayed.
• If you use *Do Not Disturb*, add Chrome as an exception during work hours.

4. iPhone / iPad — 2 minutes

iPhones only allow notifications from the **home-screen app**, and only in **Safari** on **iOS 16.4 or newer** (Settings → General → About → iOS Version). Notifications from a Safari tab or Chrome on iPhone won't work.

INSTALL

1. Open **Safari** and go to the Workspace address above.
2. Tap the **Share** button (square with an arrow) → scroll down → **Add to Home Screen** → **Add**.

TURN ON

3. Open **Focus Realm from your home screen** (not from Safari). Sign in again here — the home-screen app has its own sign-in — and tick **Keep me signed in**.
4. On **Home**, tap **Turn on** → **Allow**. Then **Settings → Notifications → Send a test**.

Make calls ring reliably: iPhone **Settings → Notifications → Focus Realm**: Allow notifications, **Sounds** on, Banner style **Persistent** (so a call stays on screen). If you use a *Focus* mode at work, allow Focus Realm in it.

5. What you'll be notified about

- **Calls** — Meet now (rings), and missed calls.
- **Tasks** — new tasks for you, update requests, work accepted or sent back, deadline reminders.
- **Meetings** — invitations, changes to time or details, cancellations, founders' replies.
- **Announcements** from the founders and management.

6. If something's not working

Settings → Notifications says "blocked"	You tapped *Don't allow* earlier. Allow notifications for Focus Realm in your phone's or browser's settings, then tap **Turn on** again.
iPhone shows "Add the Workspace to your home screen first"	You're in Safari, not the home-screen app. Follow section 4 and open the app from the home-screen icon.
Test works, but calls don't ring	Check sound/vibration is on, Do Not Disturb / Focus is off (or allows Focus Realm), and on Android that Chrome's battery setting is **Unrestricted**.
Notifications stopped	Signing out of a device stops its notifications. Open the app, sign in again — they come back on their own.
New phone or laptop	Turn notifications on separately on every device you use.
